

WASHINGTON STATE
UNIVERSITY

Query Foundations

Vicky Wall and Lenna Wenke

Welcome!

At the end of this section, you will be able to:

- Look up common tables to use in query development.
- Create simple queries.
- Join multiple records together to create more complex queries.
- Make queries more efficient by using prompts.

Log in -

Query Viewer

Enter any information you have and click Search. Leave fields blank for a list of all values.

Query Name:

Description:

View Record Name:

View Field Name:

Access Group Name:

Folder Name:

Query Type:

Owner:

When using the IN or BETWEEN operators, enter comma separated values without quotes. i.e. JOBS.EMPLOYEE_ID IN (1,2,3)

My Favorite Queries

Query Name	Description	Owner	Folder	Permissions	Grid	Print	Schedule
WSU_CONTROL_LOOKUP_LIN	Look up Run Control by ID	Private	WSU/WSU	100%	Grid	Print	Schedule
WSU_CONTROL_LOOKUP_LIN	Look up Run Control by ID	Private	WSU/WSU	100%	Grid	Print	Schedule

Searching Using Wildcards

- _ replaces a single character
- % replaces a string of characters. It can be used in front of or behind the search term.

Where do you start?

QUERY NAMING CONVENTION

Based on the WSU Data Standards, here are some suggested prefixes to use for naming your services:

Prefix	Department
A	Admissions
F	Financial Aid
R	Student Records
S	Student Financials
V	Advising
P	Payroll Services

WSU_A_ENROLLED_NO_ADVISOR

WASHINGTON STATE UNIVERSITY

QUERY DEVELOPMENT

Description

- 30 Characters.
- General description of the query.
- Use key words to facilitate searching.
- Can search in Query Viewer.

WASHINGTON STATE UNIVERSITY

QUERY DEVELOPMENT

- Runtime prompts are pop-up selection windows which appear when the query is ran that asks the end user to enter information or select something from a list.
- Is your query PUBLIC or PRIVATE?
- Folders can be used to categorize and organize Queries. Queries may only be stored in one folder at a time.
- The best way to ensure the query is efficient is to run it and verify that its run-time is less than one minute, preferable just a few seconds.
- **TEST IT IN THE TEST ENVIRONMENT!!!!**

WASHINGTON STATE UNIVERSITY

TERMINOLOGY

- Relational Database
 - A collection of records/tables that can be linked together using various fields
- Record/Table
 - A collection of related data arranged by rows and columns
- Column/Field
 - The information displayed when the query runs
- Query
 - A request that reads and returns data from the database
- SQL
 - Structured Query Language. This is what the system sees and executes based on the query you build.
- Criteria
 - Behind-the-scenes logic that tells the query what information to retrieve
- Join
 - The process of combining two or more records
- Primary Key
 - A field or group of fields that uniquely identify a row in the table

Search for and add Records to your Query

Search Results

Record	Personalize	Find	View All	First	1-20 of 75	Last
ADMIT_LVL_TBL - Admit Level Table						
ADMIT_TYPE_LNG - Related Lang-Admit Type Table						
ADMIT_TYPE_TBL - Admit Type Table						
ADM_ACTION_LANG - Related Lang-Adm Action Tbl						
ADM_ACTION_TBL - Admissions Actions Table						
ADM_APPLCTR_LNG - Related Lang-Applicatn Ctr Tbl						
ADM_APPLCTR_TBL - Application Center Table						
ADM_APPL_CMP - Adm Application Component						
ADM_APPL_DATA - Admission Application Data						
ADM_APPI - DFP - Dnncst Information						

Each record in the table has an "Add Record" and "Show Fields" link.

Review Record and Field Information

CTRL +SHIFT+C shortcut keys
Inspect Element

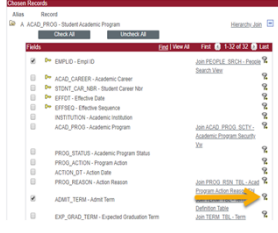

Query Tab

The purpose of the Query tab is to provide a location where all the Records used in the Query can be displayed and where Fields can be selected to use in the Query

WASHINGTON STATE UNIVERSITY

Adding Prompts

From the Query tab select the funnel by the field you wish to add criteria/prompt

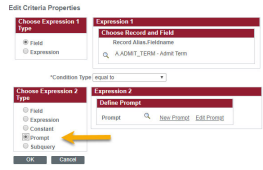

WASHINGTON STATE UNIVERSITY

Edit Criteria Properties

Once the funnel has been clicked this page opens and you change the Choose Expression 2 Type from Constant to Prompt.

You then can choose New Prompt or if you already have a prompt in the query choose the magnifying glass and select the prompt.

WASHINGTON STATE UNIVERSITY

Creating Prompts Page

Field Name – Name of field to be prompted.

Heading Type – Specify delivered or custom Heading Text

Type – Select the type of data in the field.

Heading Text – Enter the text that the user will see on the prompt.

Format – Choose the format for the prompt table.

Unique Prompt Name – filled in automatically by the system and shouldn't be changed.

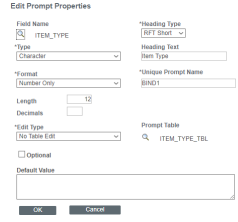

Length – determine the Prompt field's length

Decimals – number of decimals allowed for numeric prompts

Edit Type – define the prompt type of field edit

- No Table Edit – No Data Validation (Optional)
- Prompt Table – Data Validation
- Translate Table – Select from dropdown list.
- Yes/No Table – This will produce a Yes/No Prompt checkbox.

Prompt Table – specify the record to use for data validation

Using Prompts from Criteria button

Adding Prompts through the "Add Criteria" Button automatically adds the Prompt as Criteria.

Records	Query	Express	Prompt	Fields	Criteria	Index	Dependency	Transformation	View SQL
Query Name: qv_TENTATIVE_ACTIVITY					Description: By Item Type - Person Records				
Working on selection					Relationships and Navigation				
Top Level of Query									
<div><div>Add Criteria</div><div>Group Criteria</div><div>Reader Criteria</div></div>									
Criteria	Expression	Condition Type	Expression 2	Unit	First	1 of 2 of 12	Last	Details	
Local	Account_Type - Item Type	equal to	2		Edit				
AND	Account_Amt - Item Amount	not equal to	0.00		Edit				
AND	Account_Term - Account Term	equal to	3		Edit				
AND	EMPLID - Emp ID	equal to	EMPLID - Emp ID		Edit				
AND	BEFFCT - Effective Date	Equal to	Current Date		Edit				

Prompt Tab

Adding Prompts through the Prompts tab will add the Prompt however, the prompt will have to be manually added as Criteria

Records	Query	Expressions	Prompts	Fields	Criteria	Joining	Dependency	Transformations	View SQL	Run
Query Name : IF_ITEMTYPE_ACTIVITY Description : By Item Type - Person Records Working on selective Top Level of Query										
Add more										
Prompts List Personalize Edit Add First 1 of 3 of 5 Last										
1 = ITEM_TYPE - Item type Edit Cancel 2 = ITEM_TYPE - Item type # Edit 3 = ACCOUNT_NUMBER - Acct Term Edit										
Save	Size All	New Query	Preferences	Previews	Publish as Feed	Publish as First Grid				

Field Tab

The purpose of the Fields tab is to show a list of all of the Fields selected for the Query and to determine how those fields should be displayed in the Query results.

Change the:

- Order
- Sort Options
- Column Headers
- Select Translate Values

[illegible][illegible]

The screenshot shows the 'Save' dialog box in the 'Query Editor'. The 'Name' field is highlighted with a red arrow and contains the text 'QUERY_01'. Below the 'Name' field, there are several tabs: 'Query_01', 'New Query', 'Preferences', and 'Connections'. The 'Query_01' tab is selected. Below the tabs, there is a text input field for 'Enter a name to save this query:' with the value 'Query_QUERY_01_Test'. Below this, there is a 'Description: Text' field. Below the description field, there is a 'Folder: AWARDIA' dropdown menu. Below the folder dropdown, there is a 'Query Type: CUD' dropdown menu. Below the query type dropdown, there is a 'File Name: CUD' dropdown menu. Below the file name dropdown, there is a 'Query Definition:' text area. At the bottom, there are 'OK' and 'Cancel' buttons.

The purpose of the run tab is to allow users to view the results of the query.

[View All](#) | [Rerun Query](#) | [Download to Excel](#) | [Download to XML](#) First 1-100 of 902 Last

1	User	Query Name	Record	Last Run

8	AD_EWL_TCR_ORDERED	W_ADMISSION_RPT	11/02/2018 11:15:09AM	
9	AD_NEW_WORK_HAS DECISION	W_ADMISSION_RPT	11/02/2018 11:12:30AM	
10	AD_PSD_ADD_AWFW	W_ADMISSION_RPT	11/02/2018 11:08:12AM	

If you are seeing duplicate rows in your query, you can use `distinct` in Properties to limit your results.

Caveat – this doesn't work if you have unique information displaying in your rows.

5 Query Name: New Unsaved Query

Click folder next to record to show fields. Check fields to add to query. Uncheck fields to remove from query. Add additional records by clicking the records tab. When finished click the fields tab.

WASHINGTON STATE UNIVERSITY

Effective Date

- There is frequently a need to keep track of historical changes to information within the database. The student status will change as he or she enrolls, graduates, etc. Name, addresses, service indicators, or amounts are also often kept as historical references. There may also be a need to store something that will be effective in the future.
- Effective-date (**EFFDT**) specifies the date on which data becomes effective.
- Effective status (**EFF_STATUS**) indicates which row is currently active and which rows were previously active (inactive) for configuration history.
- Effective sequence (**EFFSEQ**) tracks the sequence of changes in rows for transactional history.

WASHINGTON STATE UNIVERSITY

Effective Data

Effective dated records are classified in one of three categories

- Current** – The latest effective date that is less than or equal to today's date. Only the current row will display in the Query results.
- History** – The effective date is less than the current effective date.
- Future** – The effective date is greater than the current date.

WASHINGTON STATE UNIVERSITY

Effective Date Criteria

<p>EffDate<= Returns the one row that is closest or equal to the Expression 2 date value without exceeding it. If Expression 2 is "Current Date", then Query will retrieve the most current row from the table.</p> <p>EffDate< Returns the one row that is closest to the Expression 2 date value without equaling or exceeding it.</p> <p>Eff Date >= Returns the one row that is the nearest to being equal to or greater than the Expression 2 date.</p>	<p>Eff Date > Returns the one row that is nearest to and greater than the Expression 2 date.</p> <p>First Effective Date Returns the row with the oldest effective date, usually, the first row that is entered for an item.</p> <p>Last Effective Date Returns the row with the latest effective date, even if that date is still in the future.</p>
